

DA 2002

Casing spooler

The DA 2002 offers a simple and low-cost possibility to spool up natural casings and to reduce the preparation time at the filling station. Due to the two-rolls-technics the casing can carefully and safely be spooled onto the nozzle without charging the nozzle unilaterally.

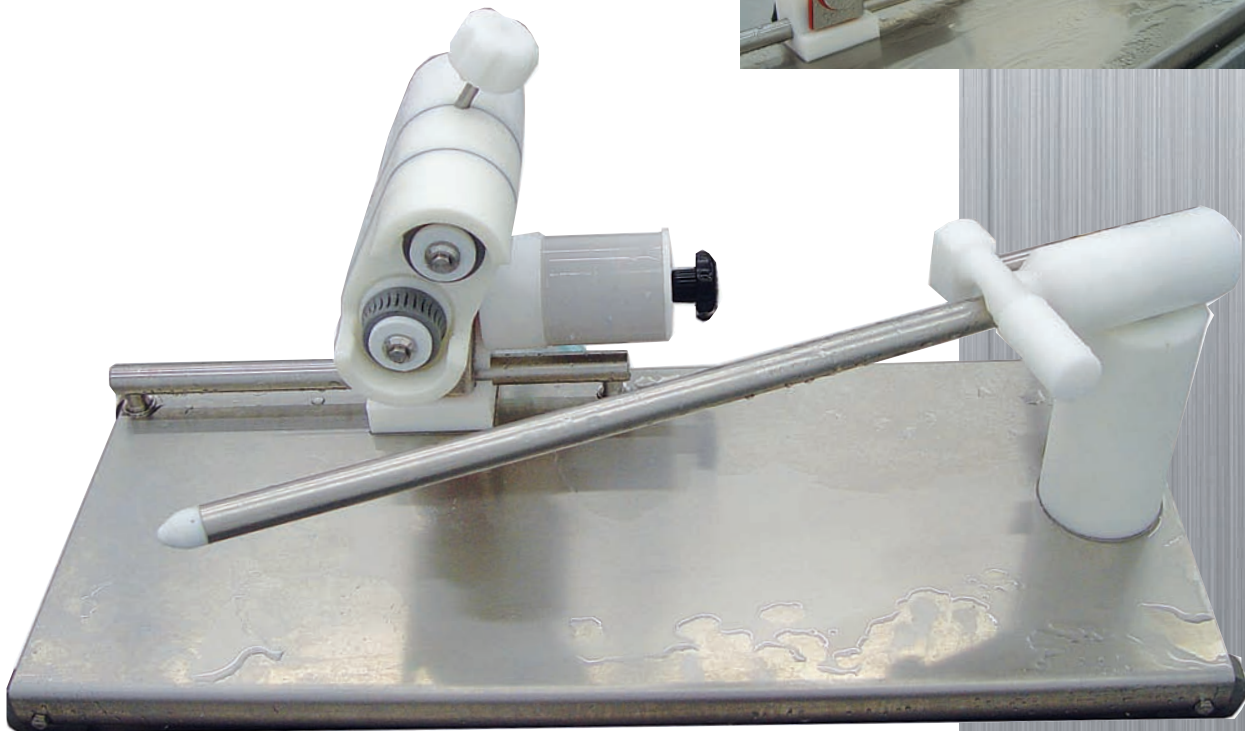

The device works pneumatically and will be delivered with rolls and holder for FREY stuffers. The DA 2002 can quickly and easily be cleaned.

DAS 2004

The semi-automatic casing spooler

The DAS 2004 offers a simple and low-cost possibility to spool up natural casings in advance and therefore reduces the preparation time at the filling station. The device works pneumatically with two rolls which carefully treat the casing. The DAS 2004 can quickly and easily be cleaned.
